Gas Appliance Pressure Regulators with integrated gas filter

FRI/6 Series

CSA Certified

- ANSI Z21.18 / CSA 6.3
- Gas Appliance Pressure Regulator
- File # 1135455

EU Gas Appliance Directive

- EN 88
- CE-0087 AU 0030

UL Unlisted Component

• File # MH 16727 (sp)

Commonwealth of Massachsetts Approved Product

- Approval code G1-1107-35
- Gas pressure regulator and gas
 inline filter

US, Canadian and EU Models

- FRI 705/6
- FRI 707/6
- FRI 710/6
- FRI 712/6
- 1/2 in. NPT 2 in. NPT
- Rp ½ Rp 2

Codes and Standards

This product is intended for installations covered by but not limited to NFPA 86, NFPA 54, ANSI Z83.4, ANSI Z83.18, ANSI Z21.13, UL 795, CSD-1, CSA B149.1, CSA B149.3 and CSA B149.6.

DUNGS is an ISO 9001 manufacturing facility.

Description

The FRI/6 balancing type pressure regulator combines a pressure regulator and a 50 micron gas filter in one housing. Various combinations are possible using the FRI/6 with the most of the DMV shutoff

valves for a compact, modular system:

- Stand-alone pressure regulator and gas filter with threaded flanges, or direct mount to DMV sizes 701, 702 and 703 series safety shutoff valves.
- Regulator output pressure monitored by direct mounting an A2 type pressure switch. Additional ports to sense inlet and outlet pressure are also located on the threaded flanges.
- Heavy duty diaphragm construction for durability and strength.
- Steady, precise and instantaneous regulation of the outlet pressure.

- Lock-up type regulator (see page 2 and 3 for details).
- Factory installed vent limiter. Review applicable codes for vent line requirements.

Application

The FRI/6 pressure regulator is recommended for industrial and commercial heating applications and is suitable for natural gas, propane, butane, air and inert gases. Suitable for up to 0.1 % by volume, dry H₂S.

A "dry" gas has a dew point lower than +15 °F and its relative humidity is less than 60 %.

FRI/6 Balancing type, spring-loaded pressure regulator with adjustable setpoint spring. Internal sensor for regulating output pressure.Integrated 50 micron gas filter. Direct mounting of A2 pressure switch possible.

Specifications

•					
Body sizes	FRI 705/6 - FRI 707/6	FRI 710/6 - 712/6			
Flanges	1/2" - 1" NPT or Rp	1" - 2" NPT or Rp			
Max. operating pressure	7 PSI (500 mbar) UL and CE 5 PSI (350 mbar) CSA				
Max. body pressure	15 PSI (1000 mbar)				
Input pressure range	2 in. W.C. to 200 in. W.C. (5 mb	par to 500 mbar)			
Output pressure range	1 in. W.C. to 60 in. W.C. (2.5 m adjustable with different spring Actual outlet pressure is +/- 15				
Materials in contact with gas	Housing: Seals and diaphragms:	Aluminium NBR-based rubber			
Ambient temperature rating		50 °F for up to 5 PSI.			
Installation position	Regulator dome from vertically upright to lying horizontally				
Test ports/ Pressure switch mounting ports		s on each side of regulator, sensing downstream let and outlet flange (if used as a stand alone re-			
Gas filter (standard)	50 micron; replaceable				
Vent line / Back loading port/ Breathing plug	limiter, which limits the escape	ISO 228. The FRI also has a factory installed vent e of gas to less than 0.5 CFH @ 5 PSI in case at- s. Venting required unless otherwise accepted by n.			
Hysteresis/Droop	Hysteresis is less than 10 % for Average droop at 20:1 turndow				

Lock-up Rating Parameters

Per ANSI Z21.80, lock-up is defined as an outlet pressure not more than 150 % or 5 in. W.C, whichever is greater, above the setpoint after a downstream safety shutoff valve closes with 2 seconds, and the two following conditions exists:

- 1) outlet pressure is set to the highest set point of the spring, and
- the regulator is set to maximum capacity or flow at which the regulator will control lockup pressure within the acceptable limits.

This means that in a given application, a lockup greater than 150 % or 5 in. W.C could occur, depending out the inlet pressure, the outlet pressure of the regulator, the flow rate of the regulator, and the pipe volume downstream the regulator and upstream the safety shutoff valve.

Per EN 88, lock-up is +30 % of the outlet pressure setting after downstream shutoff valve slowly closes within 30 seconds. Therefore, in a given application, a lockup greater than +30 % or 5 in. W.C could occur, depending out the inlet pressure, the outlet pressure of the regulator, the flow rate of the regulator, and the pipe volume downstream the regulator and upstream the safety shutoff valve. If in a given application the lock-up pressure is too high, imploying one or more of the following should reduce the lock-up pressure:

- 1) increase the size of the regulator.
- 2) increase the pipe volume downstream the regulator and upstream the safety shutoff valve.
- 3) decrease the inlet pressure.
- 4) decrease the oulet pressure.
- 5) reduce the flow rate.

FRI pressure ports

1, 2, 3 (Ports 2 and 3 are located on flange)

Port 1 is thread type G $^{1\!\!/}_{\!\!8}$ as per DIN ISO 228

Ports 2 and 3 are thread type G $^{1\!\!/_{\!\!8}}$ as per DIN ISO 228

All ports can be used with accessories or A2 pressure switches.
